

PRODUCT
OnlinePROOF

SHORT DESCRIPTION
True-color, digital proof

APPLICATION
Interactive correction process

BENEFIT
Proof matching in real-time

Time is money and corrective matching with physical proofs are costly. More often that a proof might be in transit for several days: From your media service provider per courier to you, at your company to the different departments and finally per courier back to media service provider.

That is not necessary. With OnlinePROOF corrective matching takes place in real-time and entirely digitally. A modern processing without media interruptions and at enormous speed.

With calibrated monitors you see exactly what the printer will put onto paper. Different print materials (e.g. paper color, paper classes) can be simulated in true color. Corrections can be highlighted with special tools and are visible to all other users immediately. All annotations are saved permanently and can be viewed as history. It doesn't get any more comfortable than that!

Benefits

Your benefits

- Completely digital correction proofs
- Geographical independence from your service provider
- Tracking of all corrections
- Revision safety of correction statuses
- Cost-reductions through the elimination of physical proofs
- Saving on courier costs
- Simultaneous correction matching with multiple persons in parallel

The most important functions

- True-color visualization of pages
- Application of different ICC profiles
- Stepless magnification down to pixel level
- Full-screen view
- Digital Post-Its for corrections
- Tool for text corrections
- Integrated conference function
- Visualization of individual color excerpts

Main functions

1

Completed pages are opened online and examined with the appropriate color adjustment.

Digital samples can be opened at the same time for color reference.

2

Interactive correction tools for color matching and text review support the process.

3

Possibility for stepless magnification of page sections to examine all details in the highest possible resolution.

4

Selection of color excerpts to inspect blank or overprinted elements also supports the sign-off process for the interchangeability of black text across different language versions.

OnlinePROOF is one of our innovative products. Upon request, OnlinePROOF can be fully integrated into our unique multi-channel system OnlineMediaNet. The unbeatable benefits of both solutions are combined to achieve maximum efficiency for your marketing.
